SCHEDULE OF LOSS OCR

Requirements Gathering

- ~~Be~~ Scan an image of a paper receipt for text → Date, Vendor, Items, Price, Tax
- Scan handwritten schedule of loss for text (by row, delimit by column)
- ~~Extract~~ Let user upload multiple receipts → each batch upload = 1 SoL, can add
- ~~Give option to~~ Identify scanned text as required data (to be filled onto spreadsheet)
- Give option for user to modify ~~edit~~ identified data, or skip to spreadsheet generation
- Generate Schedule of Loss as excel spreadsheet, using template.
  ↳ items should be sorted by date
- Required Data / Data to Identify: ↳ (FIELDS)
  1. 'Item Description'
  2. 'Purchased From'
  3. 'Date Purchased'
  4. 'Original Purchase Price' → before tax
  5. 'Details' → tax identification, GST? PST? Both? no tax? tax included?
  6. 'Price with Taxes' value from 4. + tax %
- Data is erased after spreadsheet is generated
- Let user choose if want to upload paper receipts or ~~paper~~ handwritten schedule of loss

handwritten SoL as input is a nice-to-have, not part of the mvp.
